ISOLATOR BRAKE HUB ASSEMBLY

ABSTRACT OF THE DISCLOSURE

A brake hub assembly for a washing machine transmission includes an input shaft, a brake hub, and a deformable isolator insert positioned between the shaft and the hub. The insert includes a plurality of substantially flat legs extending partially into an opening in the brake hub. The legs are deformed by the input shaft when the shaft is positioned within the brake hub. The legs of the isolator insert separate the hub and the shaft and prevent them from rattling.
